Instrument List:

- [Green](#)

Discussion:

It was observed that the real-time display for D3R wasshowing inconsistent dropped rays during operation and the archived netcdf moment data was also of inconsistent size.The issue started around 8:00 UTC on June 5th.At 13:46 UTC on June 5th the netcdf archiving software was reset andresolved the display and archiving size inconsistencies. During this period, the raw time-series data that is used to generate the netcdfwas not affected and was archived properly. The time-series data will be used to regenerate the incomplete or missingnetcdf moment data.
